Lecture 1: unique topic for this page

On page 1 specifically, we cover: the first law of thermodynamics states energy is conserved in a closed system.

Lecture 2: unique topic for this page

On page 2 specifically, we cover: entropy always increases in an isolated system, which is the second law.

Lecture 3: unique topic for this page

On page 3 specifically, we cover: a Carnot engine sets the theoretical upper bound on conversion efficiency.

Lecture 4: unique topic for this page

On page 4 specifically, we cover: phase transitions release or absorb latent heat without a temperature change.

Lecture 5: unique topic for this page

On page 5 specifically, we cover: the Gibbs free energy determines whether a reaction proceeds spontaneously.
